## DETAILED ACTION

### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Wendell Jones on December 20, 2007.

The application has been amended as follows:

In claim 1, line 4, "at least one conducting layer wherein a capacitance is formed between the suspension mechanism and the at least one conducting layer wherein a first capacitance is formed on a first side of the suspension mechanism and a second capacitance is formed on a second, side of the suspension mechanism; and" *has been deleted* and

-- a first conducting layer arranged opposite to the suspension mechanism and separate from the data storage layer wherein a first capacitance is formed between the suspension mechanism and the first conducting layer on a first side of the suspension mechanism and a second capacitance is formed on a second conducting layer on a second side of the suspension mechanism arranged opposite to the data storage layer and separate from the first conducting layer; and-- *has been inserted*.

In claim 13, line 4, "providing at least one conducting layer wherein a capacitance is formed between the suspension mechanism and the at least one conducting layer

Art Unit: 2863

wherein a first capacitance is formed on a first side of the suspension mechanism and a second capacitance is formed on a second side of the suspension mechanism; and”  
*has been deleted and*

-- providing a first conducting layer arranged opposite to the suspension mechanism and separate from the data storage layer wherein a first capacitance is formed between the suspension mechanism and the first conducting layer on a first side of the suspension mechanism and a second capacitance is formed on a second conducting layer on a second side of the suspension mechanism arranged opposite to the data storage layer and separate from the first conducting layer; and -- *has been inserted.*

Amendments to claims 1 and 13 were made to define over the applied prior art. This system is deemed to be non-obvious over the systems of the prior art.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gibson et al. (USPUB 2006/0219905) teaches a method and device enabling capacitive probe-based data storage readout.
